WELL ABANDONMENT AND REPLACEMENT PROGRAM (WARP) STATUS REPORT - EML-0521-92

ROCKY FLATS PLANT, P.O. BOX 464, GOLDEN, COLORADO 80402-0464 • (303) 966-7000

WARP has abandoned 46 groundwater monitoring wells and installed seven replacement groundwater monitoring wells. All of the field work proposed outside of the floodplains has been completed. Work at the 15 monitoring wells located in the floodplains scheduled for abandonment during this fiscal year has been waiting on the publishing of a Statement of Findings in the Federal Register since April 17, 1992, when the comment period ended and no comments were received on the Notice of Involvement.

Your staff has informed us that publishing the Statement of Findings is probably not imminent. Given this uncertain status and subcontractor standby costs of approximately \$5000 per week, it appears prudent to close out the field season and add these 15 wells to next year's program of 50 wells. Therefore, in accordance with your discussion with Tim Lovseth of my organization, we will be demobilizing our field operations personnel on or about September 1, 1992. Please contact Mark Levin of the Earth Resources Division at extension 8580 or digital page 0604 with any questions.
